

Novation Calculator Proposal

RushNDush Logistics, LLC

Prepared by Paul Hartman · Common Ground Technology LLC

Version · 2026-07-17

Offer

This is a focused build to help RushNDush Logistics, LLC evaluate deals faster, save better assumptions, and move from “property review” to “offer confidence” in one workflow.

Investment

\$500 flat

~20 hours total development + testing

This is a discounted rate. If RushNDush Logistics, LLC is happy with the outcome, I’d appreciate warm referrals.

What RushNDush Logistics, LLC Gets

- Cleaner property-level analysis flow built for real acquisition decisions
- Live MAO/profit feedback while editing key assumptions
- A “save analysis” path that keeps deal context on the property
- A foundation for next-step contract/document generation workflows

Value Proposition

If this tool shortens decision time by even a few minutes per lead, and improves offer quality across active opportunities, it pays for itself quickly through better conversion and cleaner negotiations.

Design Preview

The UI direction is intentionally operator-first: fast scanability, clear risk/profit signals, and minimal clicks between “input” and “decision.”

- Property summary and financial inputs are grouped for fast entry and review.
- Deal summary panel keeps MAO, net profit, and key ratios visible at all times.
- Default-value indicators support quick starts while preserving override flexibility.
- Negotiation notes remain attached to the same analysis workflow for context retention.
